SUMMARY

I am Hassan Ali, a Full Stack Web Developer with three years of experience in the field. I have completed my Intermediate Education with a major in Physics, Computer Science, and Math (ICS). Here are some of my technical skillsFrontend HTML, CSS, Bootstrap, Tailwind, JavaScript, Jquery, Reactjs, Nextjs

Backend PHP, MySQL, Nodejs, ExpressJS

CMS WordPress (development of themes and plugins, websites using Elementor)

Other Skills: ON-Page SEO, Website SEO & Speed Optimization up to 95%, Domain & Hosting Issues Management SEO Friendly Content Writing, Fillable PDF forms creation, and Generative AI.

Tools VS Code, Canva, Pixlr Express, Adobe Acrobat ProI have ample experience building custom-coded websites and management dashboards, creating WordPress themes and plugins, and crafting pixel-perfect website layouts based on the provided designs. This broad knowledge also extends to dealing with domain and hosting issues, updating DNS settings, and troubleshooting most hosting service providers, including Hostinger, GoDaddy, Cloudways, and 123-reg.co.uk.I can make banners, thumbnails, logos, featured images, and CVs for graphic design, apart from web development. I have a handful of other skills I can even convert basic PDFs into fillable PDF forms. I use VS Code when coding, and when it comes to graphic design, I use Canva or Pixlr Express, as well as Adobe Acrobat Pro for PDFs.

PROJECTS

Custom WordPress Website Theme

📅 11/2022 - 11/2022   📍 Location

The client has requested that I convert their website design into a functional WordPress website. They have provided the design, and now require a skilled developer who can take the design and turn it into a fully functional website using WordPress.

It was easy for me to create this design in HTML CSS. but the Client wants this website in WordPress. So, first I simply created this designn in HTML, CSS, and JS code. As WordPress Is also developed using these languages and PHP and MySql. I already worked with these languages. So I then converted that design into a wrodpress theme and uploaded that custom theme to there Wordpress website

PROJECTS

JeevansathiStudio.com ~ Custom Website Development

📅 10/2022 - 11/2022　📍 Location

I was approached by an Indian client who required a wedding photography website with a dashboard to manage and update images. They needed a custom-built platform that would allow them to showcase their photography services and allow potential clients to browse their portfolios. Asked by Client "Would you be able to assist with developing such a website and a dashboard for managing and updating images?"

To begin the project, I conducted extensive research on Indian wedding photography websites to get an idea of the appropriate design style. Although the client had given me a general idea of the website sections they wanted, no specific design was provided. Using HTML, CSS, and JavaScript, I designed an attractive and user-friendly interface for the website.

To manage the website's slider and gallery images, I utilized my expertise in PHP and MySQL database development to create a custom dashboard. This dashboard allowed the client to upload, update, and delete images, as well as view data submitted by users. For privacy reasons, the dashboard was restricted, while the website URL was provided to showcase the design and functionality. Overall, I successfully delivered a high-quality, user-friendly wedding photography website that met the client's needs.

🚀 Dynamic QR Code-Enabled Website Transformation

📅 09/2022 - 09/2022　📍 Location

Client Inquiry: 🤔 "I had a complex project for my website, and I needed a web developer who could handle it. The project consisted of three phases. First, I needed someone who could build a website according to a given design. Second, I required a dynamic QR code generator for my website because it was a product website. Finally, I had some QR codes that needed to be made workable as new QR codes, and I needed someone who could handle it all. I was wondering if you had the skills and expertise to complete this challenging project."

Solution 🛠️
To complete the project, I leveraged my expertise in PHP and MySQL languages, which made the project relatively straightforward for me. Firstly, I created a responsive and pixel-perfect custom website that replicated the given design with precision. Next, I created a dynamic QR code management dashboard that included a name for each QR code, as well as edit and delete buttons for easy management.

One particular challenge was that the client's given QR codes needed to be redirected to a different path under their domain. I was able to successfully resolve this by connecting that directory to the database and creating a redirection from that path to the path where other QR codes were working. It was essential to ensure that the QR codes were not redirected to another domain, and I was able to handle this effectively through my expertise in PHP and working with the MySQL database.

Overall, I was able to complete all the project requirements without any hassle, and the QR code management dashboard was hidden for privacy reasons. However, the website link is available for viewing to demonstrate the quality and precision of the website I built. 🌐✨
